

1. Scope, Governance & Contractual Clarity

- **v1 vs Post-v1 bleed risk**
Several SUPPs reference “future”, “optional”, or “Phase 2” behavior without hard guards (DEC-001).
- **Definition of “out-of-scope enforcement”**
No explicit mechanism to prevent teams from implementing ERP/MIS-like features accidentally.
- **Decision Log ownership & closure process unclear**
DEC items are listed but no RACI, SLA, or “decision freeze” milestone defined.

2. Authentication, Tenancy & RBAC

- **Auth flow not locked (DEC-003):**
 - Password vs passwordless
 - SSO required or optional per tenant
 - MFA enforcement rules (who, when)
- **RBAC matrix incomplete (SUPP-003):**
 - Missing role → action mappings for edge cases (retakes, overrides, exports, impersonation)
 - PSP vs Brand admin boundary still fuzzy
- **Cross-tenant user behavior** not fully specified
(e.g., one PSP user across multiple tenants)

3. Campaign, Fulfillment & Rebase Logic

- **“Fulfillment started” definition ambiguous**
(order created vs shipped vs received) → affects rebase gating.
- **Multiple orders per store per campaign** not clearly allowed/blocked (SUPP-015).
- **Pinned slot disappearance after rebase** handling not deterministic.
- **Partial fulfillment scenarios** not fully defined
(e.g., kit shipped but store removed mid-campaign).
- **Cancellation & rollback rules** incomplete once fulfillment is in progress.

4. Orders, Shipments & Batches

- **Order/shipment state machine incomplete** (DEC-009):
 - Missing terminal/error states
 - No clear retry vs manual intervention split
- **Batch vs custom tracking dimensions unclear** (DEC-010):
 - What is batch-scoped vs shipment-scoped vs item-scoped?
- **Carrier integration assumptions** implicit but not formalized.
- **Shipment exception handling** (lost, damaged, partial) underdefined.

5. Verification, Photos & Proof

- **Photo verification rules not locked** (DEC-004):
 - Minimum photos per slot
 - Angle / framing rules
 - Metadata requirements (time, GPS?)
- **Reject / retake loop edge cases** unclear:
 - Max retakes?
 - Auto-expire vs manual close?
- **Human vs automated verification boundary** not explicit (even without AI).

6. Surveys, Layouts & Logic

- **Survey version pinning semantics** unclear:
 - What happens if survey changes mid-campaign?
- **Repeatable section → slot auto-creation** undecided.
- **Conditional logic scope** (SUPP-015) underspecified:
 - Nested conditions?
 - Cross-question dependencies?
- **Validation rules** incomplete:
 - Required-if precedence

- Min/max photo enforcement timing (client vs server)

7. Stores, Regions & Geographies

- **“Critical fields” definition missing** (SUPP-013):
 - Which changes trigger re-verification?
- **Verification impact unclear:**
 - Hard block vs soft warning?
- **Territory hierarchy rigidity** undecided:
 - Fixed depth vs flexible tree
- **Store lifecycle states** not fully enumerated (active, paused, closed, archived).

8. Exports, Reporting & Takeout

- **Historical export column set not finalized** (SUPP-005).
- **XML schema strategy unclear:**
 - Generic vs partner-specific.
- **Export timing & consistency guarantees** undefined (snapshot vs eventual consistency).
- **Large export throttling / pagination behavior** underspecified.

9. Webhooks, APIs & Integrations

- **Webhook security model incomplete** (SUPP-006):
 - IP allowlists optional or mandatory?
 - Rotation of signing secrets?
- **Retry / backoff / DLQ thresholds** not finalized.
- **Idempotency guarantees** not consistently defined across endpoints.
- **Manual vs automated integration split** still open (DEC-005).

10. Retention, Data Classification & Assets

- **Class B long-horizon default not chosen** (SUPP-008).
- **Retention vs export conflict resolution** unclear (DEC-002).
- **External asset link validation policy missing** (allowed domains, expiry handling).
- **Video support in v1 undecided** (storage, playback, retention).

11. Offline, PWA & Sync

- **Offline photo capture expectations** not concrete for pilots.
- **Max offline storage per device** not defined.
- **Conflict resolution on re-sync** underspecified (duplicate uploads, partial submissions).
- **User feedback during offline failures** not specified.

12. Notifications & Escalations

- **Notification matrix incomplete** (DEC-014):
 - Event → recipient → channel gaps
- **Deduplication & suppression rules** unclear.
- **Escalation timing & retry rules** not fully specified.

13. Platform Ops, Dev & Delivery

- **Agentic dev guardrails** incomplete (DEC-006):
 - What can autonomous agents change without approval?
- **Merge & release policy** partially defined.
- **Decision drift detection** not automated (SUPP-021 mentions intent only).
- **Environment parity exceptions** not documented.

14. Observability, Audit & Compliance

- **Audit event completeness** not validated against all workflows.
- **Correlation ID propagation guarantees** not enforced everywhere.
- **Export of audit logs** not explicitly covered.
- **Accessibility coverage** (SUPP-038) not mapped to all screens.

15. Implementation Readiness Gaps

- Several SUPPs still marked “**planned**” or “**scaffold**”, not executable specs:
 - SUPP-003 (RBAC)
 - SUPP-005 (Exports)
 - SUPP-006 (Webhooks)
 - SUPP-008 (Retention)
- **OpenAPI spec** depends on DEC-015 → blocks downstream teams.
- **CI drift guards** defined conceptually but not enforceable until decisions close.
